

Piano Diagnostic:

Students with very little or no piano experience will be placed automatically in Elementary Keyboard Skills and need not prepare anything for the piano diagnostic.

Students with previous piano background may ready themselves for the diagnostic, if they so choose, by preparing one or more of the following:

1. One piece of solo piano repertoire at the level that best represents the student's ability
2. As many scales and arpeggios as have been studied (correct fingering is expected)
3. A sight-reading example will be given to determine the student's ability to read and process music at the keyboard
